

## Product Usage Instructions

# Ultra Clean and Tear TearAway Stabilizer

---

- Cut the Ultra Clean and Tear stabilizer approximately 2" larger than your hoop.
- Spray the Ultra Clean and Tear with temporary spray adhesive. If using multiple layers of stabilizer, adhere all layers together with temporary spray adhesive.
- Center the Ultra Clean and Tear over the design area on the wrong side of the item to be embroidered and gently smooth into place.
- Center the design area of the item to be embroidered over the center of the hoop.
- Secure the item in the hoop without pulling or stretching the fabric.
- Embroider the item.

HINT: A topping such as Stitch2O or Heat2Go should always be used on towels and is recommended for most all embroidery.

### REMOVAL INSTRUCTIONS:

- Remove your embroidered item from the hoop.
- Hold the embroidered item with the stabilizer side up.
- Tear the stabilizer carefully away from the embroidery, supporting the embroidery stitches between your thumb and finger to avoid distorting the embroidery or tearing out fragile stitches.
- If multiple layers were used, remove layers one at a time.
- Any remaining exposed stabilizer will disintegrate with laundering, but will remain under the stitches to add support to the design.
